

# Career opportunities at IBM Research

We specialize in applying statistical models to problems in artificial intelligence systems, natural language processing, and automatic knowledge discovery.

We are looking for research scientists, recent Ph.D. graduates or Ph.D. candidates expected to graduate in the next few months. Fields of interest include computational linguistics, computer science, math, physics, EE or related fields.

Candidates should have the following qualifications:

- Strong machine learning and/or NLP background
- Excellent programming skills
- Passion for problem solving
- Ability to work effectively on a team

If you want to invent the next statistical model for parsing or the next great artificial intelligence system, our team may be the place for you. Please send your CV to Salim Roukos and Bowen Zhou:
